

MRUNAL KUBAL

Java Tech Lead | GenAI Developer Productivity | Enterprise Architect

Thane, Maharashtra | +91 8879756218 / +91 8108246077 | mrunalkubal20@gmail.com

PROFESSIONAL SUMMARY

Results-driven **Java Tech Lead** with **9+ years** of enterprise software engineering experience, specialising in **GenAI-powered developer productivity tools**, enterprise Java/J2EE architecture, and cloud-native solutions. Proven record leading cross-functional teams, defining scalable microservices architectures, and integrating Large Language Models (LLMs) — including OpenAI/ChatGPT, LangChain, and Perplexity — into production enterprise workflows. Deep expertise in **Spring Boot**, **Kubernetes**, **Docker**, **Azure**, and **CI/CD pipeline** automation. Experienced in building AI-assisted migration and code-generation tooling, with strong working knowledge of enterprise security, **GDPR compliance**, and governance standards across Banking, Insurance, and FinTech domains.

CORE TECHNICAL SKILLS

Java Architecture	Java 8 / 11 / 17, J2EE, Spring Boot, Spring MVC, Spring Security, JPA, Hibernate, REST APIs, Microservices, API Gateway, Design Patterns, Enterprise Architecture
GenAI & LLMs	OpenAI / ChatGPT, LangChain, HuggingFace, Perplexity API, Prompt Engineering, Agentic AI, RAG pipelines, LLM-powered code generation & migration tools
IDE & Tooling	IntelliJ IDEA, Eclipse, IDE plugin frameworks (IntelliJ Platform SDK / Eclipse PDE), Developer productivity tooling, VS Code extensions
Cloud & DevOps	Azure (Key Vault, AKS, App Services), AWS (EC2, S3, Lambda), GCP fundamentals, Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD pipeline design
Security & Compliance	GDPR / Data Privacy, RBAC, OAuth 2.0, Enterprise security standards, Audit logging, ISO 8583, Azure Key Vault, Secrets Management
Frontend	Angular 8+, React, TypeScript, JavaScript, HTML5, CSS3
Databases	Oracle, MySQL, MongoDB
Testing & Quality	JUnit, Mockito, Jest, TDD, Code Reviews, SonarQube
Observability	Grafana, Prometheus, Swagger / OpenAPI
Methodology	Agile / Scrum, Maven, Git, Architecture & Sequence Diagramming, Enterprise Design Reviews

PROFESSIONAL EXPERIENCE

Virtusa	Feb 2022 – Present
Lead Software Developer → Java Tech Lead	
Java 17, Spring Boot, Azure (AKS / Key Vault), Microservices, Docker, Kubernetes, CI/CD (GitHub Actions / Jenkins), GenAI / LLM Integration	
- Led enterprise architecture for a large-scale Credit Card Platform, defining microservices blueprints, API contracts, and governance standards adopted across the engineering org. - Architected and delivered a GenAI-powered Angular-to-React migration assistant using OpenAI ChatGPT and Perplexity API, reducing manual migration effort by ~40% for enterprise frontend codebases. - Integrated LLM-driven code-generation tooling into the developer workflow (IntelliJ-compatible prompts, CI/CD hooks), enabling automated boilerplate generation and documentation drafts. - Spearheaded migration of legacy Backbase services to Azure Cloud, improving horizontal scalability and reducing infrastructure costs; integrated Azure Key Vault for enterprise-grade secrets management.	

- Designed and enforced **automated CI/CD pipelines** (GitHub Actions + Jenkins) including security-gate stages, SonarQube analysis, and container vulnerability scanning aligned with enterprise compliance policies.
- Improved critical API response times by **30%** through profiling, query optimisation, and caching strategies.
- Produced high-quality architecture, sequence, and deployment diagrams for CTO-level stakeholder reviews; acted as primary technical authority for design approvals.
- Mentored junior and mid-level engineers through structured code reviews, architecture walkthroughs, and pair-programming sessions; established team coding standards and best-practice playbooks.
- Collaborated with product, security, and platform engineering teams to align GenAI tooling with corporate data-privacy (GDPR) and auditability requirements.

Capgemini

Mar 2020 – Jan 2022

Senior Software Developer

Java 11, Spring Boot, Angular, Microservices, REST APIs, Docker

- Developed and owned dynamic insurance product modules (Travel, Car, Cross-sell) via an **API-first microservices** approach integrated with third-party enterprise systems.
- Designed modular, reusable service components to accelerate developer productivity and reduce time-to-feature across teams.
- Optimised Angular frontend load time by **25%** through lazy loading, change-detection strategy tuning, and bundle analysis.
- Achieved **85%+ Jest unit test coverage** for critical business components; promoted TDD practices within the team.
- Contributed to API governance reviews ensuring OpenAPI specifications met enterprise integration standards.

CGI

Dec 2018 – Feb 2020

Senior Software Developer

Java 8, Spring MVC, MySQL, REST APIs, Enterprise Credit Systems

- Built core credit-decisioning modules for the **STRATA Credit Decision Engine**, deployed at major U.S. banking institutions — demonstrating deep enterprise Java architecture expertise.
- Delivered a **20% performance improvement** through client/server logic optimisation and strategic query redesign.
- Contributed to architectural design of large-scale credit workflows, ensuring extensibility and compliance with financial industry standards.

C-EDGE Technologies

Feb 2017 – Dec 2018

Assistant System Analyst

Java 8, Spring MVC, Oracle, Multithreading, ISO 8583, SFMS

- Implemented **RBAC** (Maker / Checker / Auditor / Admin) for IBK User Interface Portal, aligning with enterprise security governance and audit requirements.
- Integrated **NEFT / RTGS** processing with SFMS including acknowledgements, reporting, and UTR enquiry modules — ensuring compliance with RBI regulatory standards.
- Implemented **ISO 8583 message processing** for KIOSK, Micro ATM, and M-Passbook interfaces — real-time financial transaction handling at scale.
- Built bulk upload and audit reporting modules supporting regulatory compliance and operational traceability.

Unotech Software Pvt. Ltd.

Jun 2016 – Feb 2017

Software Engineer

Node.js, MongoDB, AWS (EC2, S3)

- Developed RESTful web services on Node.js + MongoDB for mobile applications hosted on **AWS**, gaining early exposure to cloud-native deployments and push-notification pipelines.

KEY GENAI & DEVELOPER PRODUCTIVITY PROJECTS

GenAI Angular-to-React Migration Assistant

2023 – Present

OpenAI ChatGPT, Perplexity API, LangChain, Java / Spring Boot, IntelliJ plugin integration

- Designed an LLM-powered assistant that analyses Angular component trees, infers business logic, and generates idiomatic React equivalents — integrated as an **IntelliJ-compatible developer tool**.

- Implemented **prompt engineering pipelines** with contextual chunking and RAG-style retrieval to handle large enterprise codebases exceeding 100K LOC.
- Reduced average migration time per component by ~40%, providing measurable ROI for enterprise-wide frontend modernisation initiatives.

AI-Augmented CI/CD Pipeline — Code Quality & Governance Gates

2024

LangChain, OpenAI, GitHub Actions, Docker, Azure AKS

- Designed and prototyped an **LLM-powered code-review gate** in CI/CD pipelines that flags security vulnerabilities, deviations from architecture guidelines, and GDPR data-handling anti-patterns before merge.
- Integrated results as inline PR annotations within the enterprise developer workflow, driving adoption without disrupting existing toolchain habits.

EDUCATION

B.E. in Computer Engineering – Shah & Anchor Kutchhi Engineering College

2015

Diploma in Computer Engineering – Vidyalkar Polytechnic

2012

AWARDS & PROFESSIONAL DEVELOPMENT

Awards & Recognition

- Best Performer of the Year
- Pat on the Back Award

Certifications & Trainings

- Generative AI — In Progress
- Agentic AI
- Docker
- Kubernetes
